# Resume

## Udvælgelsesprincip

Effektlisten består af ca. 6.400 stoffer, som Miljøstyrelsen anser for at have særlige betænkelige sundheds- og/eller miljømæssige effekter. Stofferne til listen er systematisk udvalgt på baggrund af stoffers sundheds- og miljømæssige effekter.

Udvælgelseskriterierne kan kort beskrives således:

1. Stoffer som har problematiske egenskaber i forhold til "Listen over farlige stoffer"
2. Stoffer som har problematiske egenskaber i forhold til Miljøstyrelsens "Vejledende liste til selvklassificering af farlige stoffer"
3. Stoffer som optræder på "EU's liste over mulige PBT-/vPvB-stoffer"
4. Stoffer som optræder på "EU's liste over stoffer med dokumenterede hormonforstyrrende effekter prioriteret til yderligere testning"

Stoffer, der benyttes som plantepesticider, eller som veterinære- eller humane lægemiddelstoffer er ikke medtaget på listen, fordi de er omfattet og reguleret af anden lovgivning.

Effektlisten består af ca. 6400 stoffer

## Revision af listen

Miljøstyrelsen vil også fremover revidere Effektlisten, og løbende forbedre/udbygge de kriterier, der ligger til grund for selve den systematiske udvælgelse.

# Indledning

- Baggrund for Effektlisten* Miljøstyrelsen finder det nødvendigt, at der gøres en særlig indsats for afvikling af særligt miljø- og sundhedsbelastende stoffer, herunder deres anvendelse i produkter. Målsætningen er at reducere belastningen mest muligt i hele stoffets livscyklus ved en forebyggende indsats tættest muligt ved kilden. Anvendelse af substitutions- og forsigtighedsprincippet skal prioriteres højt for at sikre et højt beskyttelsesniveau for mennesker, dyr og planter.
- Effektlisten 1997* Miljøstyrelsen udarbejdede derfor i 1996 en status for indsatsen på kemikalieområdet <sup>1</sup>. I den forbindelse blev der identificeret ca. 1.000 stoffer med uønskede skadelige effekter på sundhed og miljø. Disse stoffer blev offentliggjort i "Arbejdsrapport nr. 1 fra 1997" og er også bedre kendt under navnet "Effektlisten".
- Siden 1997 er der kommet en del nye tilføjelser til "Listen over farlige stoffer", nye stoffer tages i brug eller udfases af industrien, eller nye stoffer optræder på EU's liste over høj tonnage stoffer (en EU liste over stoffer der produceres/importeres i mængder på mere end 1.000 tons /år/ pr. producent /importør i EU). Det har derfor hele tiden været planlagt, at Effektlisten fra 1997 og "Listen over uønskede stoffer" fra 1998 (Orientering nr. 1, 1998) løbende skal opdateres.
- Effektlisten 2000* Effektlisten 2000 var en opfølgning på den proces, der blev startet i 1996. I Effektlisten 2000 blev der taget højde for ny viden indenfor kemikaliers farlighed og de seneste opdaterede ændringer i industriens forbrugsmønstre.
- Til Effektlisten udvalgte Miljøstyrelsen særligt betænkelige kemiske stoffer, der forekom i produkter på det danske marked eller produceredes i større mængder i EU. Ved udvælgelsen blev der lagt vægt på at identificere stoffer, som ud fra de foreliggende oplysninger vurderedes at være årsag til en væsentligt belastning af sundhed og miljø. Stofferne blev ikke valgt ud fra eksisterende lister, men systematisk udvalgt efter samme systematik som i forbindelse med Effektlisten fra 1997 og ud fra den i dag tilgængelige viden.
- På den baggrund blev der i vinteren 1999/2000 indsamlet og analyseret en lang række data fra Produktregistret. Ca. 9.400 kemiske stoffer indgik i arbejdet, og heraf blev de ca. 1.400 stoffer vurderet til at udgøre en risiko for sundheden og/eller miljøet.

<sup>1</sup> Miljøstyrelsen (1996). "Status og perspektiver for kemikalieområdet. Et debatoplæg" Dec. 1996.

## *Effektlisten 2004*

Effektlisten 2004 er endnu en opfølgning på de tidligere lister. Kriterierne for udvælgelsen af stoffer på Effektlisten er denne gang ændret i forhold til tidligere udgaver. Det betyder, at en række kemiske stoffer eller stofgrupper ikke længere findes på listen ligesom en række nye stoffer er på listen. Som noget helt nyt har Miljøstyrelsen valgt, at de principper og kriterier, der indgår i EU's kommende kemikalielovgivning samt i Regeringens Bæredygtighedsstrategi ([Danmarks nationale strategi for bæredygtig udvikling" fra 2002](#)) skal afspejles i "Effektlisten".

Selvom stofferne nu bliver udvalgt ud fra nye kriterier, er den mere tekniske måde, hvorpå de bliver udvalgt dog stadig den samme. Nogle stoffer udvælges rent systematisk, fordi de besidder nogle klart uønskede egenskaber, mens andre vælges, fordi der er et politisk ønske om at få dem substitueret.

Ved den systematiske gennemgang udvælges stoffer automatisk, hvis de opfylder nogle helt klare og definerede kriterier f.eks. problematiske klassificeringer, fordi de er under mistanke for at have PBT/vPvB (Persistente Bioakkumulerende Toksiske / meget Persistente meget Bioakkumulerende) eller hormonforstyrrende egenskaber.

Ved den anden metode, kaldet den supplerende udvælgelse, bliver de stoffer, der ikke fanges ved den systematiske udvælgelse, men alligevel besidder en række uønskede effekter tilføjet. Det kunne f.eks. være stoffer, som udgør et specielt problem for drikkevandet eller i affaldsstrømmen.

## *Listen over uønskede stoffer 2004*

Stoffer anført på Effektlisten, som i Danmark anvendes i bestemte mængder er efterfølgende blevet udvalgt til "Listen over uønskede stoffer 2004". Derudover er særligt prioriterede stoffer som f.eks. de nogle af de hormonforstyrrende stoffer udvalgt til "Listen over uønskede stoffer"

Anvendelse af kemiske stoffer og produkter belaster mennesker og miljø gennem hele deres livscyklus. Det vil sige lige fra stoffets produktion, dets anvendelse til dets endelige bortskaffelse.

"Listen over uønskede stoffer" skal derfor opfattes som et signal og en vejledning til virksomheder, produktudviklere, indkøbere og andre aktører om kemiske stoffer, der er betænkelige, og hvor belastningen bør reduceres. Men det er lige så vigtigt, at virksomheder ved substitution og udvikling af produkter også søger at undgå stoffer på Effektlisten. Stofferne på Effektlisten kan rent sundheds- og miljømæssigt være lige så problematiske som stoffer på "Listen over uønskede stoffer". Forskellen mellem de to lister ligger altså ikke i de

kemiske stoffers farlighed, men som udgangspunkt i de anvendte mængder.

#### *Regulering af kemikalier*

At et stof står på Effektlisen og/eller ”Listen over uønskede stoffer” er ikke udtryk for, at Miljøstyrelsen har besluttet at indstille disse stoffer til et forbud. For nogle af stofferne eksisterer der allerede hel eller delvis anvendelsesbegrænsning, og de kan være omfattet af en række internationale regler eller anbefalinger, som Danmark har forpligtet sig til at overholde. Men for nogle af stoffernes vedkommende vil der senere kunne forventes initiativer fra Miljøstyrelsens side. I de fleste tilfælde vil målet være at reducere forbruget og udledningen.

Udover direkte anvendelsesregulering kan substitution også fremmes gennem aftaler mellem myndigheder og importører/producenter. Det kan ske via indsamlings- og genanvendelsesordninger, deklaration og mærkning af produkter (f.eks. EU-blomsten eller den nordiske svane), grøn indkøbspolitik samt målrettet information. Beslutningen om hvilke virkemidler, der eventuelt skal anvendes, bestemmes ud fra en vurdering af det enkelte stofs effekter, viden om hvert stofs anvendelse, udslip, mængde, bortskaffelse m.m. I dag findes et sådant overblik ikke på alle områder, men Miljøstyrelsen arbejder fortsat på, at det skabes.

# Den systematiske udvælgelse

Fastsættelse af problematiske egenskaber Den benyttede udvælgelsesprocedure ved den systematiske udvælgelse af stoffer til Effektlisten kan sammenfattes således:

Listen over farlige stoffer **Listen over farlige stoffer**<sup>2</sup>  
"Listen over farlige stoffer" indeholder en oversigt over stoffer, der i EU er vurderet og klassificeret for deres fysisk-kemiske egenskaber, deres farlighed for menneskers sundhed samt deres effekter over for miljøet. For hvert enkelt af de ca 7000 stof/stofgrupper på listen, er fareklassificeringen angivet, herunder risikosætninger, der kort fortæller noget om stoffernes iboende farlige egenskaber.

Miljøstyrelsen har med udgangspunkt i "Listen over farlige stoffer" valgt at koncentrere sig om de stoffer, der kan føre til meget alvorlige og længerevarende skader. Det betyder med andre ord stoffer, der kan føre til kroniske skader, eller som kan skade de kommende generationer. Netop disse stoffer er også blandt dem, som EU udpeger som særligt problematiske i den nye kemikaliereregulering, og som vil blive omfattet af en godkendelsesordning.

Mere specifikt betyder det, at stoffer, der er klassificeret for de såkaldte CMR-effekter i kategori 1 og 2 (kræft, skade på arveanlæggene, fostre eller forplantningsevnen), skal have en tilladelse til den konkrete anvendelse, før de må blive brugt.

Desuden har Miljøstyrelsen valgt at stoffer, som er mistænkt for at have samme effekter (CMR kategori 3 stoffer), stoffer hvor der er risiko for alvorlig sundhedsfare ved længere tids påvirkning og stoffer som er meget giftige for vandlevende organismer og samtidig kan forårsage uønskede langtidsvirkninger i vandmiljøet, er så problematiske, at de er på "Effektlisten".

Tilsammen betyder det at stoffer, der er klassificeret for en eller flere af følgende egenskaber, er på "Effektlisten":

R33	Kan ophobes i kroppen efter gentagen brug.
R39	Fare for varig alvorlig skade på helbred.
R40	Mulighed for kræftfremkaldende effekt.
R42	Kan give overfølsomhed ved indånding.
R45	Kan fremkalde kræft.
R46	Kan forårsage arvelige genetiske skader.

---

<sup>2</sup> Bekendtgørelse nr. 439 af 3. juni 2002: Bekendtgørelse af listen over farlige stoffer

R48	Alvorlig sundhedsfare ved længere tids påvirkning.
R49	Kan fremkalde kræft ved indånding.
R50/53	Meget giftig for organismer, der lever i vand; kan forårsage uønskede langtidsvirkninger i vandmiljøet
R58	Kan forårsage uønskede langtidsvirkninger i miljøet
R59	Farlig for ozonlaget.
R60	Kan skade forplantningsevnen.
R61	Kan skade barnet under graviditeten.
R62	Mulighed for skade på forplantningsevnen.
R63	Mulighed for skade på barnet under graviditeten.
R64	Kan skade børn i ammeperioden.
R68	Mulighed for varig skade på helbred.

For en række af stoffer fra ”Listen over farlige stoffer” gælder det, at CMR-effekten knytter sig til mulige bestanddele (herunder urenheder og f.eks. indhold af benzen, 1,3-butadien, DMSO-ekstrakt) i den komplekse blanding, som er opført i listen. Det betyder, at stofferne kun skal klassificeres for CMR-effekter, hvis de indeholder disse bestanddele. Disse stoffer bærer alle én eller flere af anmærkningerne P, M, N, L, K eller J i listen, og indikerer dermed, at det ikke er hele den anførte komplekse blanding, der har CMR-effekter, men urenhederne eller bestemte bestanddele af blandingen.

Tidligere undersøgelser foretaget af Produktregistret har dog vist at de stoffer, der benyttes i Danmark ikke indeholder disse urenheder/bestanddele, og de skal derfor ikke klassificeres for CMR-effekter. Miljøstyrelsen har derfor valgt ikke at medtage de stoffer, hvis CMR-effekter udelukkende kan henføres til disse urenheder/bestanddele.

Enkelte stoffer er fravalgt, fordi de allerede er omfattet af anden regulering. Det drejer sig primært om pesticider, biocider, veterinære- og humane lægemiddelstoffer

Vejl. liste til selv-klassificering af farlige stoffer

### **Miljøstyrelsens vejledende liste til selvklassificering af farlige stoffer<sup>3</sup>**

Datamangel for kemiske stoffer er et stort problem bl.a. i forbindelse med vurdering af kemikaliers farlige egenskaber. Miljøstyrelsen vurderer, at der for op mod 90% af de godt 100.000 stofindgange på EU's fortegnelse over eksisterende stoffer (EINECS) ikke findes tilstrækkelige testresultater fra dyreforsøg o.lign.

Producenter/importører har en pligt til at vurdere om de stoffer, som bringes på markedet, er farlige på baggrund af den kendte viden om stofferne. Erfaringen viser, at datamangel for kemiske stoffer gør det meget vanskeligt at opfylde denne pligt på en kvalificeret måde. I

<sup>3</sup> Miljøprojekt nr. 635, 2001: Rapport om vejledende liste til selvklassificering af farlige stoffer

enkelte tilfælde kan det betyde, at brugerne af kemikalier i dag ikke kan få oplysning om stoffernes ikke undersøgte farlige egenskaber gennem faremærkning på etiketten.

Der er derfor i EU's udkast til en ny kemikaliereregulering krav om nye undersøgelser og i den forbindelse åbnet op for i højere grad at benytte computermodeller til at vurdere stoffers farlige egenskaber.

Miljøstyrelsen har udarbejdet en vejledende liste til [selvklassificering](#) af farlige stoffer, der er blevet til ved hjælp af QSAR modeller (Quantitative Structure Activity Relationships). Modellerne kan forudsige kemiske stoffers farlige egenskaber på baggrund af oplysninger om stoffernes struktur og fysisk/kemiske egenskaber og sammenligning med andre stoffer med kendte farlige egenskaber. Nøjagtigheden af de anvendte modeller varierer fra ca. 70-85%. Det betyder, at der vil være nogle stoffer – ca. 20% - hvor QSAR-modellerne overvurderer eller undervurderer stoffernes farlighed (falsk positive/falsk negative).

Miljøstyrelsen har benyttet QSAR-modellerne på ca. 47.000 organiske stoffer fra EINECS, som har en éntydig struktur. På listen til selvklassificering er angivet vejledende klassificeringer for 20.624 stoffer med hensyn til følgende egenskaber:

- Akut dødelig virkning ved indtagelse
- Allergifremkaldende effekt ved hudkontakt
- Skader på arveanlæggene
- Kræftfremkaldende effekt
- Farlighed for vandmiljøet

Stoffer, der findes på den vejledende liste til selvklassificering af farlige stoffer med én eller flere af de problematiske klassificeringer angivet overfor under "Listen over farlige stoffer" er på Effektlisten.

EU's liste over mulige PBT-/vPvB-stoffer

#### **EU's liste over mulige PBT-/vPvB-stoffer<sup>4</sup>**

I udkastet til EU's kommende kemikalieslovgivning, er det ikke kun CMR-stoffer i kategori 1 og 2, der skal have en godkendelse, før de må benyttes. Det gælder også for de såkaldte PBT-stoffer (persistente, bioakkumulerende og giftige stoffer) og vPvB-stoffer (meget persistente og meget bioakkumulerende stoffer). Disse stoffer anses for at være så problematiske, at de kun må tages i brug under kontrollerede

---

<sup>4</sup> Europaparlamentets og Rådets forordning om registrering, vurdering og godkendelse af samt begrænsning af kemikalier (REACH), om oprettelse af europæiske kemikalieagentur og om ændring af direktiv 1999/ , der er offentliggjort af EU-Kommissionen og findes på internetsiden; (<http://www.europa.eu.int/comm/enterprise/chemicals/chempol/whitepaper/reach.htm>)

forhold eller sagt på en anden måde, hvis der er givet tilladelse hertil.

Netop fordi stoffer med PBT/vPvB egenskaber har langtrækkende virkninger og vil kunne skade kommende generationer, er de også omfattet af den danske bæredygtighedsstrategi.

I EU kommissionens forslag til en ny kemikaliregulering er PBT/vPvB-stoffer defineret. I den forbindelse har EU udarbejdet et arbejdsdokument med de stoffer, som de i øjeblikket anser for at have PBT eller vPvB egenskaber.

Miljøstyrelsen har valgt, at alle de stoffer, der opererer på EU's kandidatliste som PBT-stoffer/vPvB-stoffer kommer med på "Effektlisten". På den måde sikres det, at der kommer øget fokus på de stoffer, der udgør et særligt problem.

Det er dog vigtigt at understrege at arbejdet med at finde nye PBT-stoffer/vPvB-stoffer eller frikende mistænkte PBT-stoffer/vPvB-stoffer sker løbende og vil tage flere år. Det bevirker, at de PBT-stoffer/vPvB-stoffer, der er med på Effektlisten alle er stoffer som på nuværende tidspunkt falder ind under EU-kriterierne. Arbejdet med at identificere disse stoffer er dog en løbende proces. Undersøgelser af stoffernes egenskaber kan derfor bevirke, at et stof som i 2003 blev anset som et PBT-stof/vPvB-stof, ikke nødvendigvis er det i 2005, fordi ny viden har fjernet mistanken.

*EU's liste over stoffer med dokumenterede hormonforstyrrende effekter prioriteret til yderligere testning.*

**EU's liste over stoffer med dokumenterede hormonforstyrrende effekter prioriteret til yderligere testning.**

Hormonforstyrrende stoffer, der er klassificeret for CMR-effekter i kategori 1 og 2 er omfattet af godkendelsesordningen i REACH. For andre stoffer med hormonforstyrrende effekter er der mulighed for at de optages efter en særlig vurdering af stoffet. Det skyldes, at der i dag ikke er udviklet internationalt accepterede testmetoder til at undersøge om et stof har hormonforstyrrende egenskaber, og der findes derfor heller ikke fuldt standardiserede kriterier til at kunne klassificere for alle hormonforstyrrende effekter.

På nuværende tidspunkt har arbejdet i EU med at prioritere stoffer til yderligere testning, når anerkendte testmetoder er udviklet, ført til en liste med 66 stoffer hvor der findes dokumentation for hormonforstyrrende effekter. Listen er dynamisk. Efterhånden som der bliver indsamlet mere viden på området, kan der både tilføjes og fjernes stoffer fra listen.

Indtil videre har Folketingets Miljø- og Planlægningsudvalg dog valgt, at alle stoffer på EU's liste over stoffer med dokumenterede hormonforstyrrende effekter, der ikke allerede er forbudte at anvende i Danmark, skal med på "Effektlisten".

På Effektlisten er stofferne angivet med CAS-nr., stofnavn og klassificering i henhold til enten Listen over farlige stoffer eller Miljøstyrelsens vejledende liste til selvklassificering af kemiske stoffer. For hvert enkelt stof er ved afkrydsning i kolonner angivet hvilket kriterium, der ligger til grund for udvælgelsen. I kolonnerne er angivet:

LOFS: Listen over farlige stoffer

Vejl. 1: Miljøstyrelsens vejledende liste til selv-klassificering af farlige stoffer

PBT/vPvB: EU's liste over mulige PBT-/vPvB-stoffer

HF: EU's liste over stoffer med dokumenterede hormonforstyrrende effekter prioriteret til yderligere testning.

trifluperidolhydrochlorid-	2062-77-3
trifluralin (indeholdende < 0,5 ppm NPDA)	1582-09-8
trihexadecylmethylammoniumchlorid, blanding med dihexadecyldimethylammoniumchlorid	x
triisobutylbenzen-1,2,4-tricarboxylat	1528-52-5
triisopropylbenzen-	27322-34-5
trimethylhexamethylendiamin (en blanding af 2,2,4-trimethyl-1,6-hexandiamin og 2,4,4-trimethyl-1,6-hexandiamin, EINECS listet) (1), Epoxide 8 (mono[(C10-C16-alkyloxy)methyl]oxiran-derivater) (2), p-toluensulfonsyre (3), reaktionsprodukter af (1),(2) og (3)	147170-38-5
trimethylphosphat-	512-56-1
trimethyltinforbindelser, undtagen sådanne nævnt andetsteds i dette bilag	x
trinatrium-[4'-(8-acetylamino-3,6-disulfonato-2-naphthylazo)-4''-(6-benzoylamino-3-sulfonato-2-naphthylazo)-biphenyl-1,3',3'',1'''-tetraolato-O,O',O'',O''']kobber(II)	164058-22-4

DANSK-NAVN	CAS NR
trinatriumbis(7-acetamido-2-(4-nitro-2-oxidophenylazo)-3-sulfonato-1-naphtholato)chromat(1-)	x
trinatriumhexafluoroaluminat	*13775-53-6
trinikkeldisulfid	12035-72-2
Tri-n-propyltin (TPrT)	2279-76-7
trioctylstannan	869-59-0
triparanol-	78-41-1
tripentylamin-	621-77-2
triphenylamin-	603-34-9
triphenylen-	217-59-4
triphenylethylen-	58-72-0
triphenylmethan-	519-73-3
triphenylmethanol-	76-84-6
triphenylphosphat-	115-86-6
triphenylphosphinsulfid-	3878-45-3
triphenylphosphit	101-02-0
triphenylpropylphosphonium-	15912-75-1
Triphenyltin	No CAS
triphenyltinforbindelser, undtagen sådanne nævnt andetsteds i dette bilag	x
triphenyltrithiophosphit-	1095-04-1
triphenylvinylphosphoniumbromid-	5044-52-0
tripropyltinforbindelser, undtagen sådanne nævnt andetsteds i dette bilag	x
tris(2,3-dibrompropyl)phosphat	126-72-7
tris(2,3-epoxypropyl)phosphat	18795-33-0
tris(2-chlorethyl)orthoformiat	18719-58-9
tris(2-chlorethyl)phosphat	115-96-8
tris(2-methylphenyl)phosphin	6163-58-2
tris(3-methylphenyl)phosphin	6224-63-1
tris(4-aminophenyl)thiophosphat	52664-35-4
tris(4-chlorphenyl)phosphat	3871-31-6
tris(4-methylphenyl)phosphin	1038-95-5
tris(4-nitro-m-tolyl)phosphat	68527-98-0
tris(chloropropanol)thiophosphat	93951-31-6

DANSK-NAVN	CAS NR
tris(methylphenyl)phosphat	1330-78-5
tris(oxiranylmethyl)benzen-1,2,4-tricarboxylat	7237-83-4
tris(oxiranylmethyl)benzen-1,3,5-tricarboxylat	7176-19-4
trizinkdiphosphid	1314-84-7
troclosenkalium	2244-21-5
troclosennatrium	2893-78-9
troclosennatrium, dihydrat	51580-86-0
trofosamid-	22089-22-1
trypsin	9002-07-7
undec-10-enylacetat	112-19-6
undec-10-enylpropionat	72928-24-6
undec-1-en	821-95-4
undec-2-enylacetat	68480-27-3
undec-3-en-2-on	10522-37-9
undeca-1,3,5-trien	16356-11-9
undeca-2,4-dienol	59376-58-8
undecan-	1120-21-4
uran	7440-61-1
uranforbindelser	x
urethan eller ethylcarbammat	51-79-6
valinamid	20108-78-5
vanadium(IV)oxidhydrogenphosphathemihydrat, lithium, zink, molybden, jern og chlor dopet	x
vanadylpyrophosphat	58834-75-6
vetrabinhydrochlorid-	5974-09-4
Vinclozolin eller N-(3,5-dichlorphenyl)-5-methyl-5-vinyl-1,3-oxazolidin-2,4-dion	50471-44-8
vinylbromid eller bromethylen	593-60-2
warfarin	*81-81-2
warfarin eller (R)-4-hydroxy-3-(3-oxo-1-phenylbutyl)-2-benzopyron	5543-58-8
warfarin eller (S)-4-hydroxy-3-(3-oxo-1-phenylbutyl)-2-benzopyron	5543-57-7
wolframhexachlorid, reaktionsprodukt med 2-methylpropan-2-ol, nonylphenol og pentan-2,4-dion	x
xenbucin-	959-10-4

DANSK-NAVN	CAS NR
xenysalat-	3572-52-9
xibornol-	13741-18-9
xylidiner, med undtagelse af sådanne specificeret andetsteds i dette bilag	x
xylometazolin-	526-36-3
xylometazolinhydrochlorid-	1218-35-5
Zineb	12122-67-7
zinkbis(dibutylthiocarbamat)	136-23-2
zinkbis(diethyldithiocarbamat)	14324-55-1
zinkchlorid	7646-85-7
zinkchromater, herunder zinkkaliumchromat	x
zinksulfat	7733-02-0
ziram eller zink-bis(N,N-dimethyldithiocarbamat)	137-30-4
AAT eller 4-amino-2',3-dimethylazobenzen	97-56-3
□,□-dimethylbenzylhydroperoxid	80-15-9
□-amylase	9000-90-2
□-glucosidase	9001-22-3
