Introduction

This guidance is for exporters of used electric and electronic equipment (used EEE). The guidance gives you an overview of countries with import restrictions on used EEE. An import restriction means that you should not export used EEE to this country. In some countries it is forbidden to import used EEE. In other countries the used EEE must fulfill various technical criteria in order to be legal to import.

Please be aware that the list of countries in this guidance is not necessarily complete and that the rules in the listed countries can change. Other countries may have import restrictions on used EEE. You should always check with the receivers of your used EEE that it is legal to import to their country.

The Danish authorities cannot stop an export of used EEE to a country with import restrictions, but they can warn the authorities in the receiving country that a shipment that might be illegal to import is on its way.

Furthermore, please be aware of the Danish Environmental Protection Agency's [general](#)

[guidance on exports of used EEE](#). In this guide you can find a general description of the rules on shipments of used EEE. These rules concern packaging, test of functionality and documentation etc.

Countries with import restrictions on used EEE have these restrictions for a reason. They want to stop illegal shipments of waste disguised as used EEE. Waste from electric and electronic equipment (WEEE) contains hazardous substances that can be harmful to humans and to the environment. Therefore, WEEE must only be treated at specialized waste treatment facilities.
